

CYBER CITY: A vibrant cyberpunk composition dominated by glowing pink and teal neon tones. The cards showcase futuristic digital designs, neon elements that capture the electric, high-tech atmosphere of a neon-lit metropolis.

Michal Markowski is a West London-based artist fascinated by mathematics, chaos, and chance.

His work explores the invisible patterns hidden in randomness. He takes a premium deck of playing cards, shuffles it thoroughly while recording the process to prove the authenticity of the unique outcome, and meticulously hand-assembles every card onto A1 canvas — permanently freezing one unrepeatable moment in time.

Drawing on the immense mathematics of $52!$ permutations, he creates bold, textured artworks that celebrate both chaos and order. Each piece is completely original and exists in only one version in the entire world.
